Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (11-MAR-2002) Ceres, Inc, 3007 Malibu Canyon Road,
Malibu, CA 90265, UGA

This clone sequence is one of 5,000 Ceres full-length cDNAs made
available to TIGR and Genbank. The following quality assessment of
this set was done by comparison with known proteins: two percent the clones are estimated to be 5'-truncated; less than one percent
are 3'-truncated; approximately two percent represent alternative
splice variants, including unspliced introns and spliced exons; one
percent may contain premature stop codons; five percent may have
frame shifts in a coding region. A sequence is considered to be
5'-truncated if it lacks the translation initiation start (ATG). A
sequence is considered to be 3'-truncated if it lacks the
c-terminal end of the encoded protein. Please note that these cDNA
sequences are derived from the Ws or Lare cotypes and therefore
may contain polymorphisms when compared to sequences from Col-0.
Genset carried out the library production and sequencing of the
full-length clones. Ceres, Inc. carried out the clustering of the
closation/Qualifiers

/note="Westor: Lambda ZAP II/pBluescript, V-type: Plasmid;
A Lambda ZAP II/DNA library was constructed from mRNA
Extracted from eticlated leaf tissue of the rice cultivar
'IR3' and converted to pBluescript (amp resistant) as
described in Causse et al. (1994) Genetics 138:1251-1274.
For insert amplification, Use MI3 forward and reverse
primers. Restriction site is ECORI. Clones from this
library are designated with the prefix 'RZ'."

The invention relates to an Arabidopsis thaliana nucleic acid (I) comprising a sequence capable of hybridising under stringent conditions to a sequence selected from any one of 999 sequences (ABN99231-ABN99231), given in the specification or lits fragment. A polypeptide (II) encoded by given in the specification or lits fragment. A polypeptide (II) encoded by given in the specification or lits fragment. A polypeptide (II) encoded by given in the specification or lits fragment. A polypeptide or a cid, is useful for screening a candidate agent for its biological effect. (I) is useful for screening a candidate agent for related genes, in producing compositions that modulate the expression or function of its encoded compositions that modulate the expression or function of its encoded compositions that modulate the expression or function of its encoded compositions that modulate the expression or function of its encoded compositions that modulate the expression of protein. Manaping functional regions of the protein and in studying associated physiological pathways. (I) is also useful in studying asceneing assays of various plant strains to determine the strains that care best capable of witheranding a particular disease or environmental care best capable of witheranding agents, insectional for screening of biologically active agents, insectional agents, insection of capacity in proved methods of treating production or than early on useful in a companion or a particular plant, for identifying other mediators that may induce that colerance to environmental stress. (I) is also useful or any specific insect and/or pathogen is responsible for damage to a particular plant, for identifying other mediators that may induce to losynthetic pathways of nutritional commercial, or medicinal value and biosynthetic pathways of nutritional commercial or medicinal or compounds that may affect the biological function of the gene or gene products or contenting or may affect the biological function of the gene or gene products or the se New Arabidopsis thaliana nucleic acid for identifying homologous genes, producing compositions that modulate the expression or function of its encoded protein, and mapping functional regions of protein Hamilton CM, Price JL, Raines TM, Yu Y, A, Mathew AV, Ledford BL, Woessner JP, Haas M, Slater T, Davis KR, Allen K, Hoffman N, Claim 1; SEQ ID NO 223; 49pp + Sequence Listing; English ecification, but was obtained in electronic format esegdata.uspto.gov/sequence.html?DocID=999909770445 An Y, Hamil Page A, Ma Kricker M, WPI; 2002-400781/43.

The present invention relates to coding sequences (see AAP44740-F44840 and AAF44843-F44844) and proteins (see AAB65714-B65814) involved in programmed cell death (PCD; apoptosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death pathway and various developmental pathways in a forestry plant, by stably incorporating one of the present coding sequences into the genome of the forestry plant, where the coding sequence provides a PCD pathway that is not present in a native form of the forestry plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel defender against cell death polynucleotide useful for modulating programmed cell death pathway and specific development pathways in forestry plant -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         203 GGTGTACCTTACGCTATGCTGTGCTTTAGTGGCATCGGCTGGGGGCTTACCTTCACAT 262

                                        The present invention relates to coding sequences (see AAF44740-F44840 and AAF44841) and proteins (see AAB65714-B65814) involved in programmed cell death (PCD; apoptosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death pathway and various developmental pathways in a forestry plant, by eathly incorporating one of the present coding sequences into the genome of the forestry plant, where the coding sequence provides a PCD pathway that is not present in a native form of the forestry plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                            309
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   489
                                                                                                                                                                                                                                                                                                                                                                          249
                                                                                                                                                                                                                                                                                                                                                                                                         260

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to proteins derived from bovine mammary gland cells. The invention is useful for stimulating bovine mammary gland cell growth and function, inhibiting the growth of various mammary gland cancer cells, inhibiting angiogenesis and vascularization of tumours, or modulating the growth of blood vessels in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 873 BP; 206 A; 218 C; 196 G; 253 T; 0 other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Polynucleotide sequences AAF17982 - AAF18424 encode human lung cancer associated proteins represented in AA588106 - AA588848. Lung cancer associated proteins and polynucleotide sequences, their agonists, and information and polynucleotide sequences, their agonists, and immunomodilatory; muscular active general; vulnerary; agertoninestinal general; nephrotropic; antinffective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung ancer associated polynucleotide sequences. The protein of lung cancer, chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to tréât; adjacorders such as neural; immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cancer associated gene sequences, referred to as lung cancer gens, useful for treatment, prevention, and diagnosis of disorders

expression Detecting granulocyte activation by detecting differential expressiof genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and Yamaga S, WPI; 2002-435328/46

Claim 1; SEQ ID No 1229; 114pp; English.

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (Gs) identified by the chip analysis as given in the specification, and comparing the expression level in an unactivated of GCA, where differential expression level in an unactivated GC, where differential expression of Gs is indicative of GCA and that alters the expression of Gs is indicative of GCA with an agent capable of modulating (M2) GA by contacting GC with an agent capable of modulating (M2) GA by contacting GC with an agent capable of modulating (M3) is unallered response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the chronic) in a tissue, an allered response in a subject or a pathogen or sterile inflammatory disease, by detecting the subject to a pathogen or sterile inflammatory disease, by detecting the cheer lof expression in a sample of the tissue of gene (s) from GS, where the level of expression of the gene is indicative of inflammating (M3) an inflammation (especially chronic) or in a tissue, an allered cesponse in a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammatory disease, by contacting a tissue having of the detecting an inflammation in a subject, exposure of a subject to a pathogen or sterile for greening an inflammation in a tissue, an allergic cesponse in a subject, exposure of a subject to a pathogen or sterile of from GS in the tissue, M1 is useful for screening an agent capable of modulating GCA preferrably in an inflammation in a tissue, M2 is useful for creening an inflammation in a subject, exposure of a subject to a pathogen or sterile response in a subject, exposure of a subject to a pathogen or sterile conformation of the above ond distance reperfusion injury, ARDS, adult respiratory distance or inflammatory bowel disease, also bacterial infection, protozol infection, viral infection, protozol infection, viral infection in generative or inflammatory because defificati of the printed specification, but was obtained in electronic cormat directly from WIPO at ftp.wipo.int/pub/published_pct_sequences The sequence data for this patent

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   432 GATCCAAGCATTGTGTTTGGGCGCTTTTTGTAGGTTGTGCTGTGGTTTTTGGTTGCTTCTCA 491
                                                                                                                                                                                                                                                                                                  This cDNA clone codes for an inhibitor protein, termed BI-1 (see AAW73136), of the pro-apoptotic protein Bax. Nucleic acids encoding BI-1 and BI-2 (see AAV5968) were identified by suppression of Bax-induced death of yeast cells transformed to express human Bax. A human Hep62 cDNA library was used for library screening. The invention provides vectors, optionally expression or viral vectors, containing BI nucleic acids, and host cells containing these vectors. The nucleic acids encoding BI-/PI-2 can be used to increase expression of these proteins in cells, or antisense molecules prepared from them used to decrease expression. In these ways, cellular apoptotic activity may be modulated (claimed). The nucleic acids and complementary sequences are also useful as probes to detect BI-encoding nucleic acid molecules in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to CDNAs encoding them (ABP6111-ABD56305), and also encompasses polypeptides 90% identical and polymotechides 93% identical to the sequences of the invention. The invention additionally relates to to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polymoteleotides and polypeptides in diagnosing, or polymoteleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and metastatic tumours of ovarian or breast origin, reproductive system cancer (e.g., infections ovarian cancer and dysmenorrhoea), anovalation, collosofers (e.g., chock syndrome, ovarian cysts, opportives, and toxic disorders, infections (e.g., chock syndrome), inflammatory conditions (e.g., mastitis, oophoritis and cyaintis), immune disorders (e.g., congenital and acquired immunodeficancies, autocimmune ophoritis, systemic lupus erythematosus), blood-related disorders (e.g., anaemia), cardiovascular disorders)
                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; ovarian antigen; ovary; ovarian; breast; cancer; tumour; ovarian cancer; breast cancer; tumour; reproductive system disorder; infertility; pregnancy disorder; anovulation; polycystic ovary syndrome; pcOs; ovarian cyst; dysmenornhoea; endocrine disorder; infection; inflammatory condition; immune disorder; blood disorder; cardiovascular disorder; respiratory disorder; neurological disorder; gastrointestinal disorder; urinary system disorder; drug screening; gene therapy; chromosome mapping; forensic analysis; antibody preparation; cytostatic; immunomodulatory; neuroprotective; antiinflammatory; gynaecological; reproductive; gene; ss.

Human secreted protein 5' EST, SEQ ID NO: 8293

New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures

respiratory disorders, neurological disorders, gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and abolynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, dung targeting and phenotyping. The present sequence represents cDNA encoding a human ovarian antigen of the
```

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

No ORF has yet been conclusively identified within the present sequence. The 5' ESTS were prepared from total human RNAs or polyA+ RNAS derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTS are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. S' ESTS are derived from mRNAs and genomic DNAs. 5' ESTS are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                602

27-APR-1999 AAV86028;

EST clone B115.

```
expressed in cancer tissues. ABB/993 to ABB/9004 represent proteins encoded by the ABG6076 to ABG60787 nucleic acid sequences. (I) can be used in antisense therapy, An antibody immunoreactive with a polypebtide used in antisense therapy. An antibody immunoreactive with a polypebtide for detecting the presence or absence of a polymucleotide encoded by a nucleic acid which hybridises to (I) in a cell. A probefyziner derived trom (I) can be used for determining the presence of a nucleic acid which hybridises to (I), and for determining the presence of cells in a sample hybridises to (I), and for determining the presence of colon cancer in a cell or tissue type, for determining the presence of state of other type of cancer, in antisense therapy, to generate macroarrays on a solid surface, to identify a chromosome on which the corresponding gene resides and in tissue profiling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise the proposites, and to screen for peptide analogues and antagonists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated nucleic acid that is differentially expressed in cancer tissues useful for determining the presence of colon cancer in a cell or tissue type, and in antisense therapy

```
This sequence represents an expressed sequence tag (EST), and is a polymucleotide of the invention. The polymucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haemostatic and thrombolytic activity, receptor/ligand activity, atti-inflammatory activity, adherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      260 -- CATTCTATGGAATATCGGTGGCCTCCTCACAACAATGGCTTGCATGGGAAGCATGGTG 317

ABB78993 to ABB79004 represent proteins expressed in cancer tissues. ABB78993 to ABB79004 represent proteins encoded by the ABG60776 to ABB60787 uncleic acid sequences. (I) can be encoded by (I) is useful for detecting cancer in a patient sample, and encoded by (I) is useful for detecting cancer in a patient sample, and concerning the presence or absence of a polymoutebotide encoded by a nucleic acid which hybridises to (I) in a cell. A probe/primer derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I), in a cell. A probe/primer derived from (I) can be used for determining the presence of colon cancer in a cell or tissue type, for determining the presence or state of other type of cancer, in antisense therapy, to generate or state of ther type of cancer, in antisense therapy, to generate or macroarrays on a solid surface, to identify a chromosome on which, the corresponding gene resides, and in tissue profilling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ABQ60318;
```

```
ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially expressed in cancer tissues. ABB78993 to ABB7904 represent proteins encoded by the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide encoded by (I) is useful for detecting cancer in a patient sample, and for detecting the presence or absence of a polymodeotide encoded by a nucleic acid which hybridises to (I) in a cell. A probe/primar derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I), and for determining the phenotype of cells in a sample of cells from a patient. (I) is useful for determining the presence of colon cancer in a cell or tissue type, for determining the presence or state of other type of cancer, in antisense therapy, to generate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid that is differentially expressed in cancer tissues useful for determining the presence of colon cancer in a cell or tissue type, and in antisense therapy

No, is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
